

TR Final Drive Gear Set for Mitsubishi Evolution

PRODUCT FEATURES

Take your Mitsubishi Evolution to the next level with the Tomioka Racing's upgraded final drives. TR Final Drive Gears are the final link to fine-tuning your race transmission. TR Transmission Components are designed to withstand the extreme on and off throttle shock loads produced during racing. By cutting to exacting tolerances from SAE8620 alloy and put through heat treatment with our own proprietary process, TR Final Drives are the bench mark of EVO performance gears. Through the use of state of the art 3D modeling CAD software with finite element analysis, our optimized gear tooth profile helps to increase tooth strength. This ensures reduced friction and minimal parasitic loss. Our gears testing included extreme use from one of the most well known EVO transmission builders in the industry. This kind of torture is meant to ensure that not only are our gears strong enough to handle the shock loads encountered during race use they are also durable enough to handle the variable loads encountered during day-to-day street driving.

APPLICATIONS

Part Number	Model	Ratio
TR-TM2000	Mitsubishi Evolution 7-9 (6 Speed)	5.09
TR-TM2001	Mitsubishi Evolution 7-9 (6 Speed)	4.00
TR-TM2002	Mitsubishi Evolution 7-9 (5 Speed)	4.00
TR-TM2003	Mitsubishi Evolution 7-9 (5 Speed)	4.90
TR-TM2004	Mitsubishi Evolution X (5 Speed)	5.00

SPECIFICATIONS

- Material: SAE8620 Alloy
- Output Shaft x 1

KIT CONTENTS

- Ring Gear x 1
- Output Shaft x 1

MSRP: £600.00 + VAT
